TOTAL:						50	3094	164	24	6	0	3	1									

(1) Water levels are almost to low for navigation, even in our shallow drafting Floating Cabins. Therefore, we might transfer these cabins to the upper Eneuxi.

(2) Numbers are a bit low for this river since they are having difficulties in getting across the sandbars on the lower half to reach the low fishing pressure area at the headwaters. Fishing should definitely improve during the last 3 1/2 days of the week.

(3) The water levels at the very tip of the head waters (8 hours from the mouth) are a bit high. The fishing will improve in the remaning 3 1/2 days as they come down 2 hours.
